

Image processing with OpenCV

Institut d'Optique – Engineers Training

Semester 6 – Digital Interface

Julien VILLEMEJANE

Image processing / OpenCV

► At the end of this training, the learners will be able to:

Use basic building blocks of OpenCV

Open an image

Create the histogram of an image

Apply basic transforms on images

- blur, filters
- erosion, dilation, opening, closing

Display the contour of objects

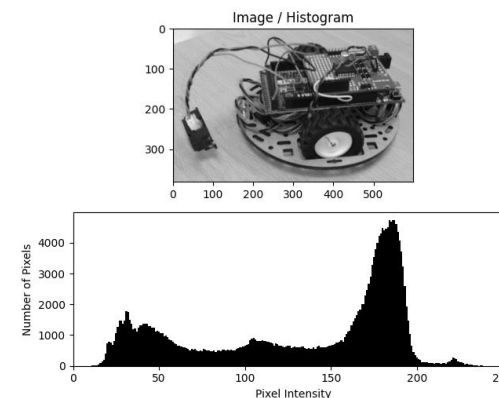

Image processing

What is image processing for ?

Why is image processing required in a machine vision chain ?

For industrial inspection applications ?

What are the **main processes** ?

What is the goal of each of them ?

What is the ideal **workflow** ?

Image processing

Goal of processing an image

Image from the camera

- **Noise**
- Bad contrast
- Inhomogeneous Lighting
- ...

Desired image with objects with **well-defined contours**

- Homogeneous zones
- Transition zones

Steps for processing an image

OpenCV

Institut d'Optique – Engineers Training

Semester 6 – Digital Interface

Julien VILLEMEJANE

Open Source Computer Vision Library

An open source **computer vision** and machine learning software **library**

supporting multiple programming languages such as Python, C++, Java, and MATLAB

Image Processing

Filtering, Edge detection, Image transformations...

Object Recognition

Detecting objects in images and videos

CV Algorithms

Motion tracking, 3D reconstruction, Augmented reality

Machine Learning

Image classification, Pattern recognition, Scene Understanding

<http://opencv.org>

Image processing with OpenCV

Python 3 and OpenCV

Installing OpenCV for Python 3

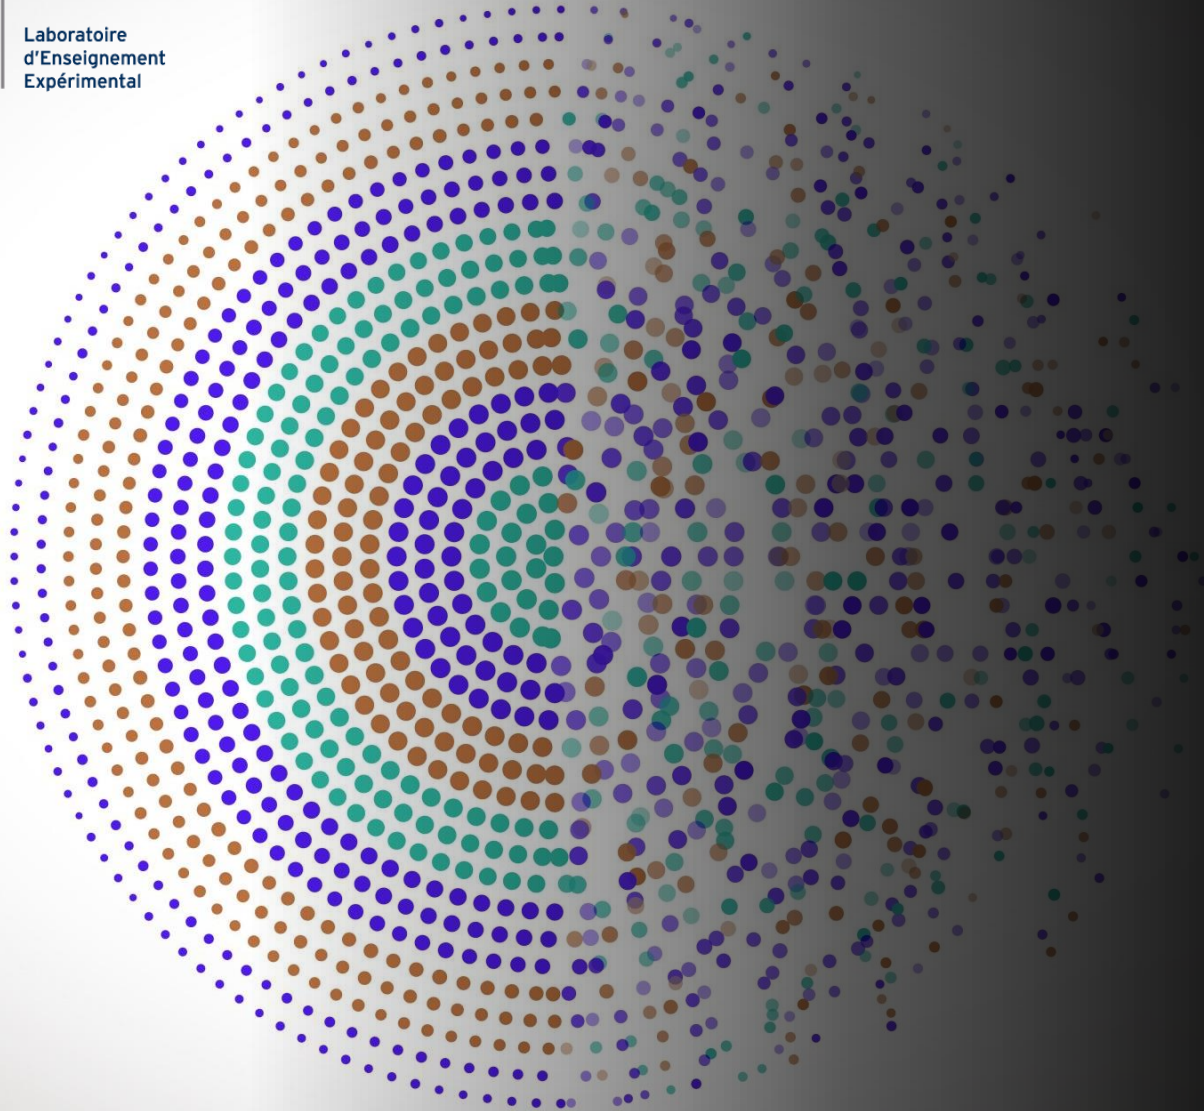

```
pip install opencv-python
```

Testing OpenCV importation in a script

```
import cv2  
Cv2.__version__
```

<http://opencv.org>

Digital Images and Processing

Institut d'Optique – Engineers Training

Semester 6 – Digital Interface

Julien VILLEMEJANE

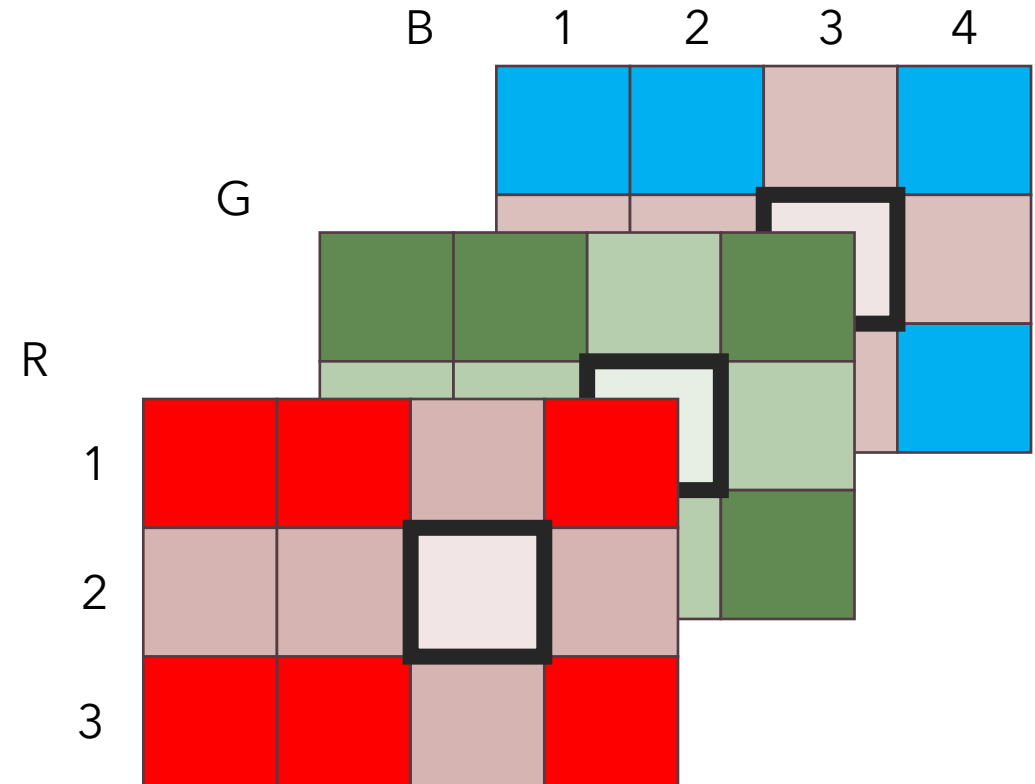

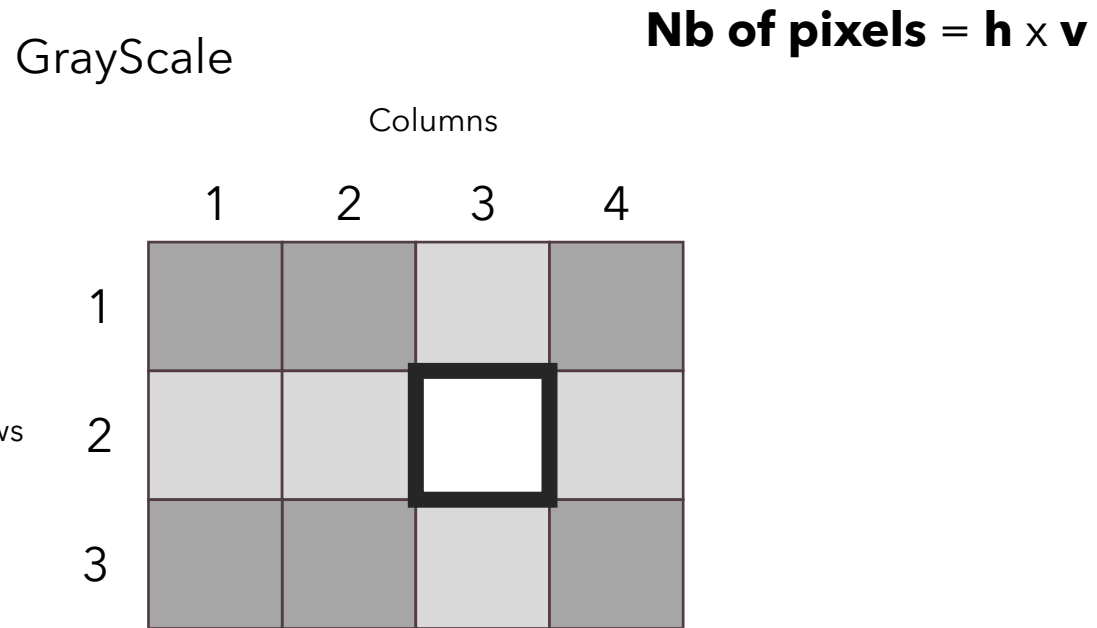

Image processing with OpenCV

Digital Images / Resolution

Image processing with OpenCV

Digital Images / Depth

Nb of pixels = h x v

GrayScale

RGB : 3 channels of 8 bits

Each pixel is converted into **n bits**.

Image processing with OpenCV

Digital Images / Color Spaces

RGB

Used primarily in **electronic displays** like computer screens, cameras, and scanners. The combination of these three primary colors at various intensities can produce any color.

HSV

Used in **image editing**. It separates image's color from its brightness.

Hue : type of color

Saturation : intensity of the color

Value : Brightness of the color

CMYK

LAB

YUV

Color Space

Model for **representing colors** in a consistent and reproducible way

Each color space uses a different method for organizing and describing color, depending on the purpose or application

Image processing with OpenCV

Digital Images / Color Spaces

Color Space

Model for **representing colors** in a consistent and reproducible way

Table 9 from
Segmentation of Images by Color Features: A Survey - Scientific Figure on ResearchGate.
Available from: https://www.researchgate.net/figure/Advantages-and-disadvantages-of-color-spaces_tbl7_323632019 [accessed 10 Oct 2024]

Color space	Advantages	Disadvantages
RGB	Convenient for image acquisition and displaying;	Non-uniform illumination sensitive; Differences between colors is not linear
HSV, HSI	Based on human color perception; Robust before non-uniform illumination; The chromaticity is decoupled from the intensity	Non removable singularities
$L^*a^*b^*$, $L^*u^*v^*$	Efficient in measuring small color difference; The chromaticity is decoupled from the intensity;	Singularity problem as other nonlinear transformations
YUV, YCbCr	Efficient coding color information for TV signal.	Due to the linear transformation, correlation between the component channels exists, although not as high as the RGB space

Acquisition

```
import cv2
```

```
image_rgb = cv2.imread('path/to/image.png')
```

```
image_gray = cv2.imread('path/to/image.png', cv2.IMREAD_GRAYSCALE)
```

```
image = cv2.imread("../../_data/robot.pgm")
```

```
print(type(image))
```

```
<class 'numpy.ndarray'>
```

```
print(image.shape)
```

```
(382, 600, 3)
```

```
cv2.imshow('Image ', image_rgb)
```

```
cv2.waitKey(0)
```

Image processing with OpenCV

Pre-Processing

Acquisition

Pre Processing

Noise Reduction / Filtering
Contrast Enhancement
Normalization

Ensuring clarity and reducing unwanted information
Making features of interest stand out
Standardizing the image scale or intensity

Acquisition

Pre Processing

Histogram

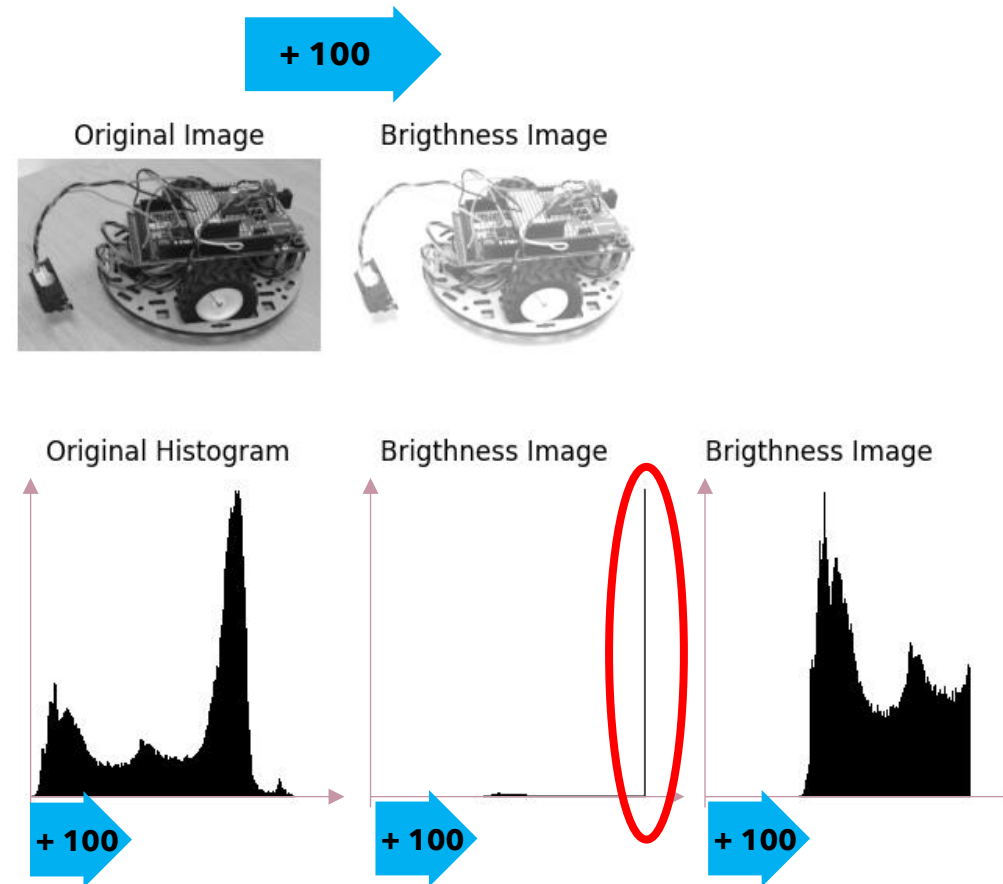

Graphical representation that shows the **distribution of pixel intensity values** in an image

```
cv2.calcHist([image], [chan], Mask, [bins_nb], [min, max])
```

```
histogram = cv2.calcHist([image], [0], None, [256], [0, 256])
```

Acquisition

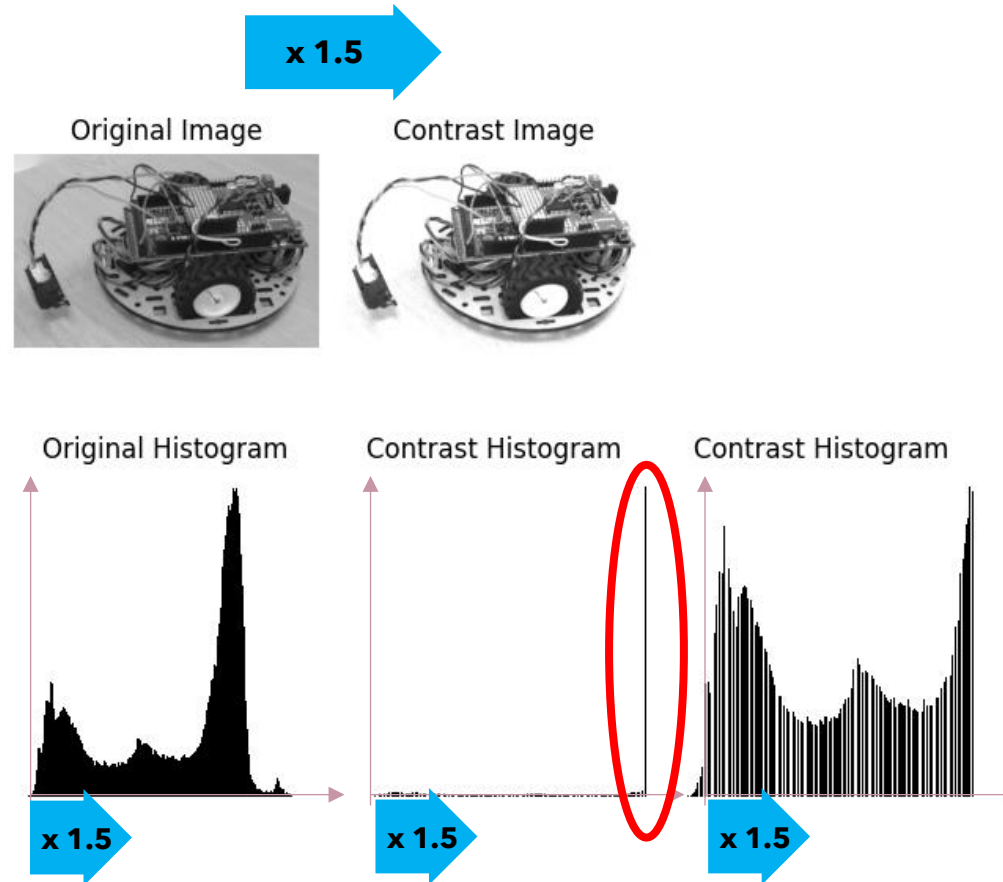

Pre Processing

```
new_img = cv2.convertScaleAbs(image, beta=100)
```

Acquisition

Pre Processing

```
new_img = cv2.convertScaleAbs(image, alpha=1.5)
```

Image processing with OpenCV

OpenCV / Convolution

Convolution (filter)

Image processing with OpenCV

OpenCV / Erosion and Dilation

Acquisition

Pre Processing

Original pixels
Removed pixels

Added pixels

Erosion

Dilation

kernel

0	1	0
1	1	1
0	1	0

Shrinking the foreground
by **removing pixels** to the
boundaries of objects

Enlarging the foreground
by **adding pixels** to the
boundaries of objects

Acquisition

Pre Processing

Eroded Image

Original Image

Dilated Image

kernel

0	1	0
1	1	1
0	1	0

Erosion

Shrinking the foreground
by **removing pixels** to the
boundaries of objects

Dilation

Enlarging the foreground
by **adding pixels** to the
boundaries of objects

```
eroded_image = cv2.erode(image, kernel, iterations=1)  
dilated_image = cv2.dilate(image, kernel, iterations=1)
```

Acquisition

Pre Processing

Opening Image

Original Image

Closing Image

kernel

0	1	0
1	1	1
0	1	0

Opening

Erosion then **Dilation**

Removing small objects,
in the background

Closing

Dilation then **Erosion**

Filling in small holes in
the foreground

```
opening_image = cv2.morphologyEx(image, cv2.MORPH_OPEN, kernel)  
closing_image = cv2.morphologyEx(image, cv2.MORPH_CLOSE, kernel)
```

Acquisition

Pre Processing

Original Image

Gradient Image

kernel

0	1	0
1	1	1
0	1	0

Gradient

Difference between a **dilation** and an **erosion**

Unknown pixels classification : background or foreground ?

```
gradient_image = cv2.morphologyEx(image, cv2.MORPH_GRADIENT, kernel)
```

cv2.imshow('Image Window', image)

Image processing with OpenCV

OpenCV / Blur and mean

```

kernel_size = (N,M)

blurred_image_gauss = cv2.GaussianBlur(image, kernel_size, 0)
blurred_image_box = cv2.blur(image, kernel_size)
  
```

1	4	7	4	1
4	16	26	16	4
7	26	41	26	7
4	16	26	16	4
1	4	7	4	1

Gaussian Kernel
(x 1/273)

Mean Kernel (x 1/(N*M))

1/9	1/9	1/9
1/9	1/9	1/9
1/9	1/9	1/9

Removing irrelevant details

Acquisition

Pre Processing

Segmentation

Feature
Extraction

https://docs.opencv.org/4.x/d3/db4/tutorial_py_watershed.html

Thresholding
Edge Detection
Region of Interest Selection

Isolating objects of ROI / Separating product from background
Identifying boundaries and contours
Focusing only on relevant portions of the image

Geometric Features
Texture Analysis
Color Analysis

Extracting measurements (size, shape, position...)
Recognizing patterns, symbols, points of interest
